

Appendix EN — Executive Summary (TechAssist)

Vision & Purpose

TechAssist is a hybrid human+AI assistance platform designed to make digital participation simple, safe, and inclusive for everyone — regardless of age, income, or prior knowledge. We automate device setup, guide users step-by-step, and embed privacy-by-design to build trust and independence.

Problem

- **Capability gap:** Many citizens and small businesses struggle with device setup, app sprawl, and cloud complexity.
- **Trust & privacy concerns:** Low confidence in settings, permissions, and data handling.
- **Cost fragmentation:** Dozens of subscriptions with little transparency.
- **No unified solution:** Tools exist, but they are siloed (remote support, e-learning, privacy tools).

Solution

- **AI Assistant with system access:** Explain → Confirm → Execute. Safe defaults, audit trail, undo.
- **Learning mode:** Micro-lessons with voice/text feedback and progress tracking.
- **Privacy coach:** Permission hygiene, risk flags, reports, and remediation.
- **Live support:** Remote guidance for edge cases and emergencies.
- **All-in-one platform:** Setup, learning, privacy, and support in a single experience.

Target Segments

- **Individuals & seniors:** Confidence, simplicity, accessibility.
- **Social/municipal programs (B2G):** Inclusive digital services at scale, reporting, compliance.
- **SMBs & self-employed (B2B):** Time savings, automation, privacy, and reduced liability.
- **Education:** Onboarding at scale, device fleets, accessible curricula.

Market & Timing

- Strong tailwinds: e-government adoption, aging population, AI mainstreaming, privacy regulation.
- Combined adjacent segments (assistants, automation, e-learning, privacy) > **€150bn by 2030**.
- Products that **reduce complexity** and **increase trust** capture outsized value.

Business Model

- **Freemium** (core access) → **Premium** subscription (€4.99/mo) + **Social tariff** (€1.99/mo).
- **B2B/B2G** licenses (€10–25k/yr) with admin console, roles, reporting, and SLAs.
- Add-ons: remote help, training, audits, white-label/OEM preinstalls.

Go-to-Market

- **B2C**: Content marketing, tutorials, community workshops, referral loops.
- **B2G/B2B**: Pilots with municipalities/NGOs, tenders, conferences, associations.
- **Alliances**: Education partners (VHS), senior orgs, welfare associations, telecom/OEM.

Product & Tech

- Architecture: modular (Assistant, Learning, Privacy, Support, Admin).
- Security: RBAC, encryption at rest/in transit, minimal telemetry (opt-in).
- Compliance: privacy-by-design/default, audit trail, undo, accessibility.
- Roadmap: MVP → Beta (100 users) → Launch → B2B Admin & Reporting → OEM preinstalls.

Financial Outlook (Illustrative)

Year	Total Users	Paying Users	Revenue
1	10,000	1,500	~€90k
2	50,000	7,500	~€500k
3	100,000	15,000	>€1.0m

- Break-even at ~3,000 paying users (~€180k ARR), expected in months 16–20.
- Unit economics: CAC (B2C) €12–18, ARPU Premium €4.99/mo, software gross margin >80%.

Competitive Edge (USP)

- Unique combination: **Automation + Assistance + Privacy**, not just one pillar.
- Human-centred design, transparent execution, and inclusive pricing.
- White-label & reporting for institutions; accessible UX for individuals.

Risks & Mitigation

Risk	Impact	Mitigation
Privacy/DSGVO	fines, trust loss	privacy-by-design, external audits
OS restrictions	feature constraints	fallback flows, accessibility/MDM APIs
Funding pace	slower scale	lean start, pilots, mixed revenue
AI acceptance	mistrust	transparency, undo, plain language

Impact

TechAssist closes the digital divide with a scalable, compliant, and human-friendly approach. It increases independence, reduces support burden, and enables institutions to deliver inclusive digital services — at sustainable cost.
